

Chatsworth

Designed to provide as much growing space as a small conventional greenhouse, but in a much more compact footprint, the Chatsworth greenhouse opens up a range of possibilities for customers put off from having a large greenhouse that dominates the garden.

Easy Access

For easy access and maximum ventilation, the Chatsworth has sliding door panels on all 4 sides. In addition the roof glass can be slid for extra ventilation on hot days.

Automatic Ventilation

Automated ventilation is provided by two louvre vents. Both have a temperature sensitive mechanism to open and close the vent as the temperature changes.

Staging

Glass centre staging allows plenty of light down to the lower levels of the greenhouse.

These toughened glass sheets can be removed for taller crops such as tomatoes.

Potting Up

For potting up a convenient work station is included. This is colour coated the same colour as the greenhouse.

Watering

8 mist nozzles provide gentle watering throughout the greenhouse. Valves allow the misting to be zoned. An optional timer can be used to automate watering.

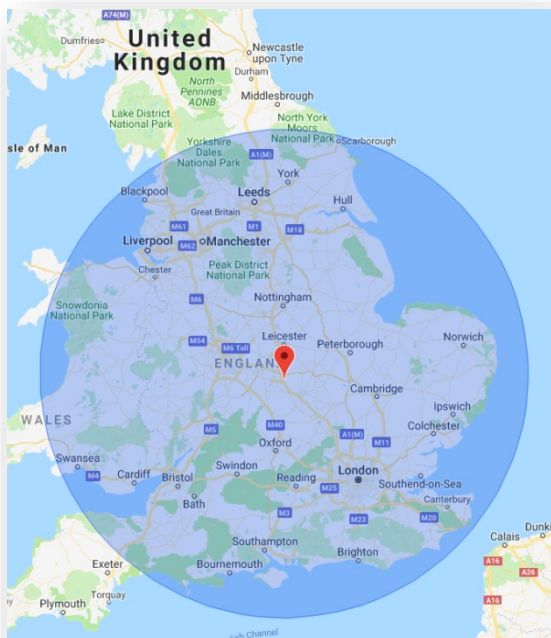

Shelving

10 seed tray shelves are included for maximum storage. The height of these can be adjusted and, if not required, will drop out of the way or can be removed.

Colour Coating

The polyester powder coating is baked onto the aluminium to provide an extremely durable finish. The Chatsworth is available in 6 colour options. However, we can match any RAL colour for an additional cost.

Solid Colours	Heritage Colours
	
Racing Green	Cotswold Green
	
Chestnut Brown	Smokey Grey
	
Arctic White	Antique Ivory
